

Vidibox XL System

The Vidibox is a daylight, patented, easy to use LED video and audio system consisting of two standard containers (Boxes) - the upper Top LED Box and the lower Bottom Box.

With its smart appearance the Vidibox attracts all eyes. It is extremely flexible in combination - and can be covered with adhesive film - the perfect choice for promotional events, road shows and sport and cultural occasions.

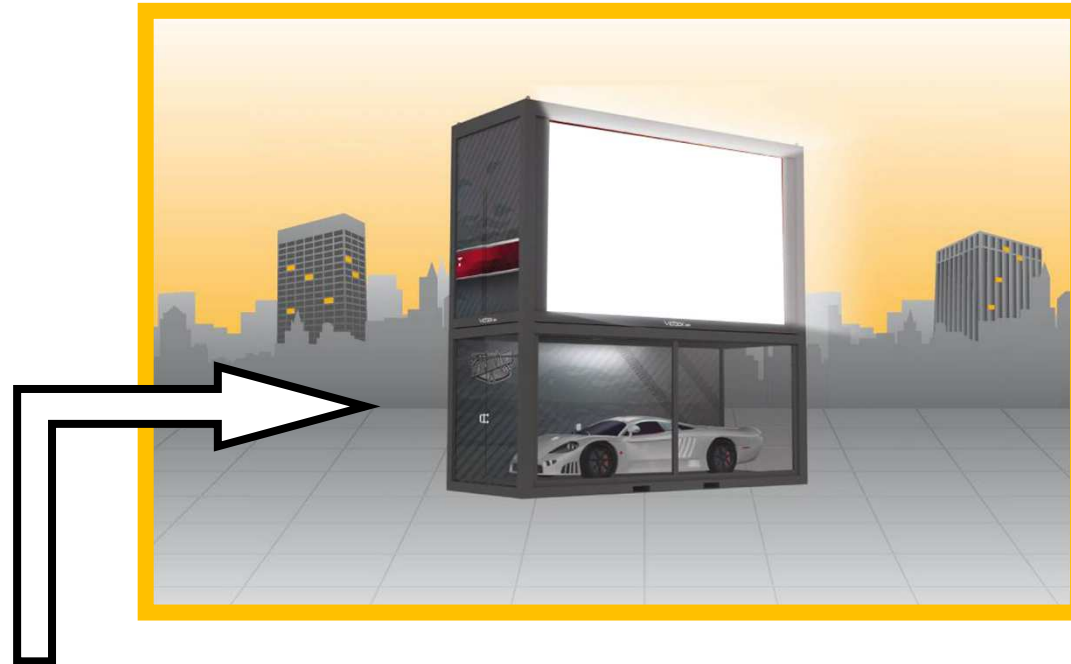

The Vidibox system is made up of 2 containers (Boxes).

The upper box is called the Top LED Box and contains the LED Video Screens

The Bottom Box is the lower of the two Boxes of the Vidibox.

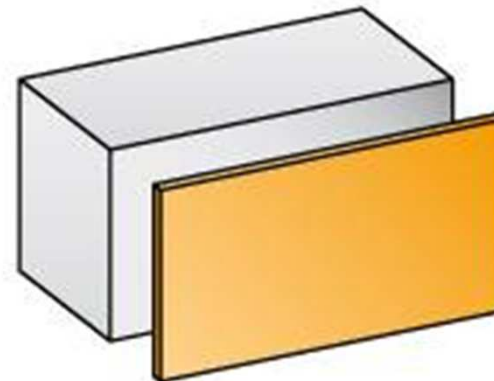

The following choice is available:

One-Screen Box

One long side of the Vidibox is provided with a high-resolution daylight LED video screen in the 16:9 format.

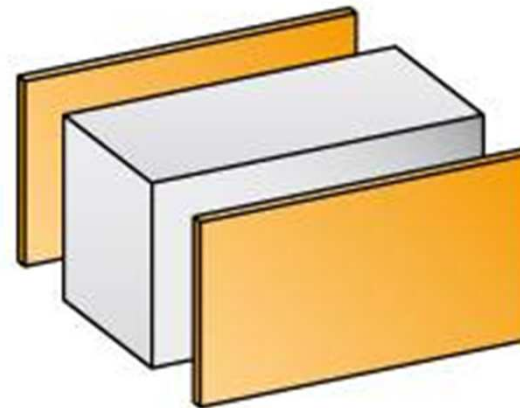

The LED display surface area is 16 m².

Two-Screen Box

The Vidibox is provided with a high-resolution daylight LED video screen in the 16:9 format on both sides.

The 2 LED display surface areas of 16 m² each give a total LED surface area of 32 m².

Die Bottom Box can be changed in different options:

Walk through

The Walk Through Box is a completely open Bottom Box then makes use of every square metre of space and also does not hinder pedestrians. By providing access from all sides and with its roof, the Walk Through Box is the ideal accompaniment for promotions.

Show Box

The Show Box consists of three sides of full-surface plexi-glass and is therefore perfectly suited for product presentations outside or inside - from a small motor car showroom to temporary sales stores.

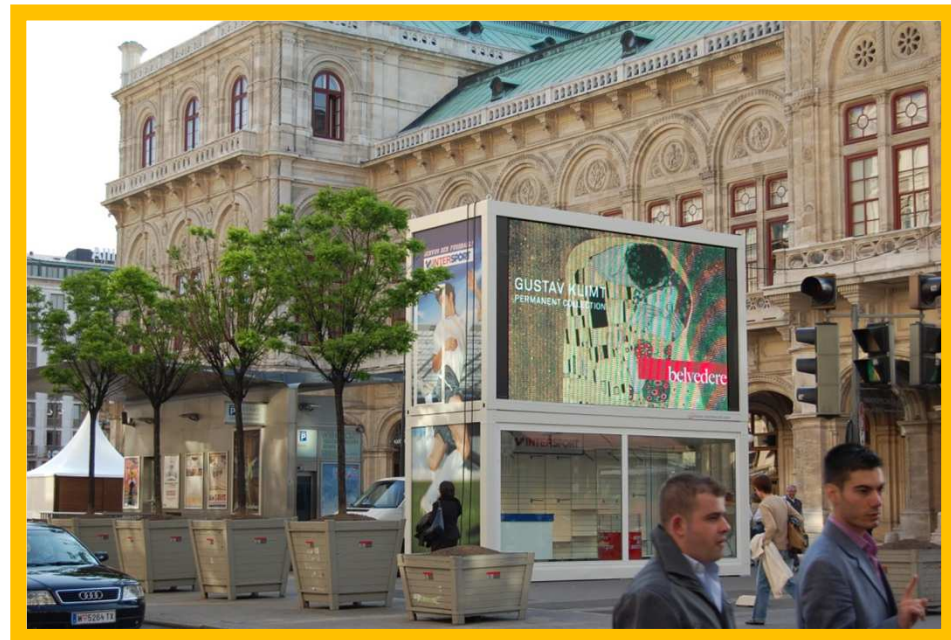

Präsentations Box

Für die Vorführung von kleineren Geräten oder Produkten eignet sich die Präsentationsbox am Besten. Dabei werden die Rückwand und die beiden Seitenteile geschlossen sodass die Kunden über die gesamte Länge von 6 Metern in das Innere des Containers gelangen.

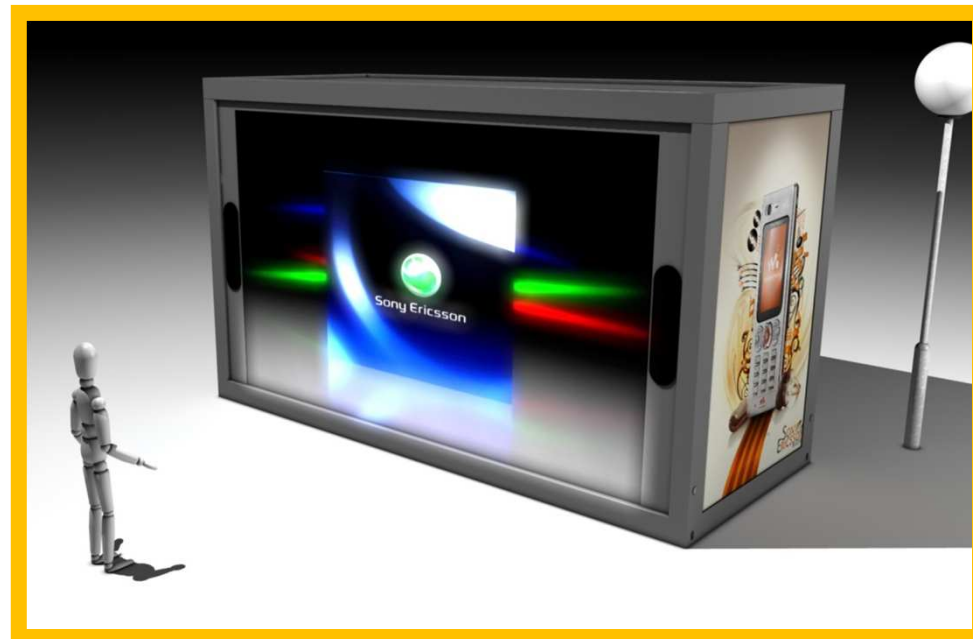

Ticket Box

Information and cashiers containers are important components of large events. With the combination of Ticket Box with Top LED Box, ticketing and advertising messages for the event can be directed at the target audience.

Standard Box

The Standard Box is fully en-closed on all 4 sides. It is popular, among others, as director containers for large events. All the „Broadcast“ technology, from live cameras to picture mixers and personnel space can be accommodated inside - with simultaneous dis-plays of video streams on the Top LED Box.

Cafe oder Restaurant Box

Drei Glascontainer nebeneinander ergeben ein kleines Cafe, einen Warteraum oder eine Lounge für die VIP Gäste.

5 Gründe für die Vidibox:

- 1 XL SCREEN**
The 16m² LED screen in 16:9 format is suitable for use in daylight and is certain to draw the attention of the crowd.
- 2 MULTIFUNCTIONAL**
The Vidibox offers the right Bottom Box for every application - whether closed, glazed, with infocounter or completely open.
- 3 INDIVIDUAL**
All areas of the Vidibox can be individually set up and decorated to the customer's requirements.

- 4 QUICK & EASY**
The Vidibox is based on Standard Containers and allows quick and easy setup and removal (max. 1-2 hours) and transport.

- 5 COMFORT**
Numerous additional options make life easy for you - online video servers, SMS/Bluetooth broadcast unit or power unit, the choice is yours.
